The "All-in-One" Aircraft Lighting Solution

www.RCLightMaster.com

You'll be the talk of the town when they see your latest pride and joy streaking through the sky ...

...With realistic, flashing lights!

R/C LightMaster™ provides complete lighting solutions for model aircraft. Our premium lighting controller can drive up to 8 different lights, each with it's own functionality. The LED lights are compact, and very bright.

The all-in-one solution makes installation easy and very clean. A single box, about the size of a receiver, drives everything. No longer will you need lots of wires going to several different circuit boards.

It's as simple as plugging servos into a receiver!

What is the R/C LightMaster™?

The RCLM-8350-OS controller unit is an all-in-one lighting controller for your model aircraft. Plug in the compatible lights with a 4.8V to 6.0V battery, and your light system is ready to go.

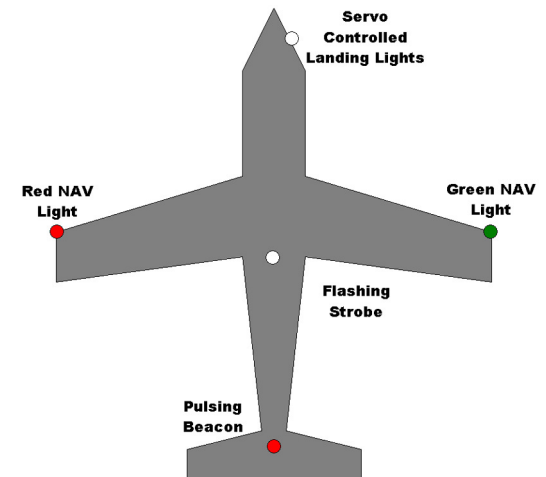

No other system can provide a simpler or more cost effective lighting installation.

What does it do?

The controller flashes strobe lights, pulses beacons, and turns landing lights on & off with your servo signals.

It comes pre-programmed to control 8 lights:

- Two Landing Lights
- Two Strobe Lights
- Two Beacon Lights
- Two NAV Lights

Can I adjust what the lights do?

Absolutely. You can customize the brightness, flash times, pulsation, and servo control of each light.

Is it safe?

The unit is interference free because the lighting system is electrically isolated from the receiver system.

(Shown Actual Size)

Controller Specifications:

- Optically isolated servo input
- Fully user programmable
- 3.15" x 1.57" x 0.59"
(80mm x 40mm x 15mm)
- 1.2 ounces (34 grams)
- Powered by a 4.8V or 6.0V battery pack (not included)
- 8 Light Channels with 350mA output each (at 4.8 or 6.0 volts)

What Lights Can I Use?

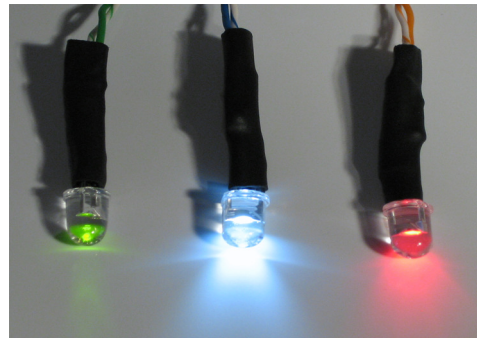

R/C LightMaster™ has a complete line of lights compatible with the RCLM-8350 controller.

Ultra-Bright Lights:

Ultra-Bright lights are brilliant enough to be seen in the air on sunny days. They have a tiny footprint, which makes installation a breeze.

High Brightness Lights:

Compact and economical, these lights are great for smaller aircraft that do not need the visibility range of larger aircraft.
